How to Get the current directory path

This code will print the current working directory to the console.

Example output:

```
Current dir : \\aserver\homedirs\ab\My
Documents\Java Workspace\JPF
Parent dir : \\aserver\homedirs\ab\My
Documents\Java Workspace
```

```
import java.io.File;

public class CurrentDir {

    public static void main(String args[]) {
        File dir1 = new File(".");
        File dir2 = new File("..");
        try {
            System.out.println("Current dir : ");
            System.out.println("Parent dir : ");
        } catch (Exception e) {
            e.printStackTrace();
        }
    }
}
```

Re: How to Get the current directory path

Note that if you are using a method which takes a String for the directory name, you can use "." to get the current directory. For example

```
JFileChooser fc = new JFileChooser(".");
```

Don't use Map as a Cache

Use ehcache instead Faster,feature rich and distributed
ehcache.org
